EYE SPECIALIST

New Vision New Life™

Enjoy healthy vision with OPTIMAX Eye Specialist

As your eyes are the window to your soul, keep them at top condition with comprehensive eye exams. Here, we offer a variety of tests and procedures to accurately evaluate the health of your eyes.

Optimax Recommends a Comprehensive Eye Examination Annually.

Comprehensive Eye Examination (EE2)

A standard eye health examination, highly recommended as an annual check-up.

Tests include:

1. Visual acuity
2. Refraction (eye power)
3. External ocular muscle assessment
4. Corneal pachymetry (thickness)
5. Intra-ocular pressure (glaucoma)
6. External eye examination
7. Ocular crystalline lens examination (cataract)
8. Fundus eye examination (various blood and eye diseases)
9. Eye health report

**Complimentary corneal topography (map) for Pre-Lasik candidate.*

Complete Eye Examination (EE3)

Recommended for first-timers and those who want a thorough understanding of their current eye condition.

Tests include:

1. Visual acuity
2. Refraction (eye power)
3. External ocular muscle assessment
4. Corneal pachymetry (thickness)
5. Intra-ocular pressure (glaucoma)
6. External eye examination
7. Ocular crystalline lens examination (cataract)
8. Fundus eye examination (various blood and eye diseases)
9. Corneal topography (map)
10. Contrast sensitivity
11. Colour vision test
12. Dry eye assessment
13. Eye health report

What is eye health examination?

Eye health examination enables our eye care professional (Optometrist) to examine whether you are at risk of developing an eye disease. The process may take more than an hour to complete. Unlike other health tests, eye examination processes are gentle, painless and harmless to your eyes.

Under Optical Act 1991, Optometrist is a professional who qualified after tertiary education to examine the eye; and prescribe and supply spectacle and contact lens

Why is regular eye examination important?

- Ensures the prescription for your contact lens or glasses are appropriate and up to date
- Detects hidden vision problems and eye diseases such as glaucoma, cataract, diabetes retinopathy and macular degeneration
- Detects health problems such as diabetes, high blood pressure, brain tumour and chances of stroke
- Prevents blindness and visual impairment by early detection and treatment
- Early detection means greater chance of healing
- Determines suitability for laser vision correction
- Eye examination is recommended by medical professionals as part of health care

What is next after an eye exam?

You will have a personal session with our vision consultants where solutions and recommendations will be provided during the session. If any abnormality is found, you will be referred to an appropriate specialist for further check-up

How to prepare myself for eye examination with Optimax?

- Please note that pupil dilation eye drop may be applied during the eye examination and this may temporarily blur your vision
- In the event where you are required to apply the eye drop, please have a pair of sunglasses ready
- Do not wear contact lens during the examination
- Prior to pre-lasik examinations, you are required to stop wearing soft contact lens for 2 weeks or hard contact lens for 3 weeks

Book your eye examination session and give your eyes the care it deserves at the nearest Optimax Eye Specialist today.
