

# Why Choose Us

Professional and experienced doctors

A strong support system and network

One of the eye specialist to introduce ZEISS SMILE® and ZEISS SMILE® Pro technology in Malaysia

Over 310,000 satisfied patients

Lifetime vision warranty

Wide range of treatment options, all under one roof

Operates a private eye hospital in Penang

ISO certified

OPTIMAX Treatment Results & Analysis System (OTRAS)

Multi-Award Winning Eye Specialist Centre

- 2024 2023 2022 Global Health Asia-Pacific Awards
- 2024 Parents' Choice Awards
- 2023 Malaysia Book of Records
- 2017 Malaysia Health & Wellness Brand Award
- 2016 MRCA National Growth Award
- 2016 Frost and Sullivan Award
- 2015 Sin Chew Business Excellence Awards

# Cataract Treatments

## Cataract Specialist In Malaysia

As we age, the clear natural lens inside our eye becomes cloudy. This condition is known as Cataract and it is commonly seen in the elderly. The cloudiness of the lens prevents sufficient light from entering the eye and causes blurring of vision.

**Scan** to chat  
or learn more

# Signs and Symptoms

Mild cataract may not affect the clarity of vision, but as it matures, it can cause:

- Blur vision
- Sensitive to light
- Double vision in one eye
- Yellowing or fading of colours
- Reading difficulty
- Poor night vision
- Glare and haloes

# Cataract Treatments

Cataracts can only be treated through surgery by removing the cloudy natural lens. After removing the lens, an artificial lens (Intraocular Lens, IOL) is inserted in place of the natural lens to enable clear vision.

## Types of Surgeries available:

- **No-Blade Surgery**  
Femtosecond Laser-Assisted Cataract Surgery (FLACS)
- **Conventional Surgery**  
Phacoemulsification

## Types of Intraocular Lens (IOL) available:

- **Monofocal IOL**  
(only corrects the distance vision)
- **Bifocal IOL**  
(corrects distance and near vision)
- **Multifocal IOL**  
(corrects distance, intermediate and near vision)

## Femtosecond Laser-Assisted Cataract Surgery (FLACS)

Uses a Femtosecond laser (a powerful light beam) to assist in removing the cataract. This technology gives more surgical precision and safety in cataract surgery.

### The advantages are:

- Minimally invasive
- Ultimate surgical precision & safety
- Predictable
- Individualized
- Better results

## Phacoemulsification

A modern surgery that uses an ultrasound to remove the cataract.

### The advantages are:

- Safe
- Good vision outcome
- Quick vision recovery
- Quick surgery time
- Painless

Your surgeon will help you decide on your lens choice depending on your daily needs.
